

Latifah's FE Auto-Planner - Quick Guide

This is an **automatic adaptive study planner**. You do not type tasks. You do not build a weekly plan. You only edit yellow cells. Everything else updates by itself.

File: [Latifah_FE_Auto_Generated_Study_Planner.xlsx](#)

The 30-second rule

- **Yellow cells** = you edit (inputs and dropdowns).
 - **Green cells** = the workbook fills these for you. Do not type in green cells.
 - **Read** the Dashboard. **Use** the Weekly Plan. That is it.
-

The three sheets

1) Dashboard

Open this first every day.

Top row of cards shows your status at a glance:

- Exam Date
- Days Remaining
- Weeks Remaining
- Progress %
- Readiness Score
- Next Best Topic

Second row of cards shows weekly numbers:

- Completed Hours
- Remaining Hours
- Weekly Available Hours
- Weekly Planned Hours
- High-Priority Topics Remaining
- This Week (X / 7 done)

The red box "What Should I Study Next?" is your daily answer:

- Today's Auto-Topic
- Today's Auto-Task
- Today's Mode + Length
- Next Best Topic Overall (the global #1 priority)
- Why this topic
- Low-Energy Backup (use when tired)

Below that you have three side-by-side panels:

Panel	What you do
Essential Inputs	Edit name, exam date, start date, study style, weekly hour bounds.
Daily Availability	Drives the planner. For each day set Min, Energy (1-5), and Mode (Normal / Low Energy / Family / Rest).
Weekly Plan Preview	Read-only. Mirrors the auto-generated Weekly Plan.

Below the panels you see four charts (Overall Progress, Top 5 by Priority, Topic Status, Weekly Hours) and a Study Modes Reference at the bottom.

2) Topic Planner

This is your control center for content. You edit only six columns:

Column	What it does
Include?	Yes (study), Later (postpone), No (skip).
Confidence	1 (very weak) to 5 (strong). Update honestly.
Boredom (optional)	1-5. Higher = topic feels boring. Affects priority slightly.
Completed Hours	Add hours you actually studied for that topic.
Status	Not Started / Learning / Practicing / Improving / Strong / Exam Ready / Skipped.
Notes	Any short note for yourself.

Everything else - **Priority Score**, **Progress %**, **Next Action** - is calculated.

The **Next Action** column tells you what to do per topic:

- **Skip for Now** - Include? = No
- **Defer** - Include? = Later
- **Keep Warm** - Progress = 100% or Status = Exam Ready
- **Study Next** - Priority Score ≥ 6
- **Study This Week** - Priority Score ≥ 4.5
- **Practice** - Priority Score ≥ 3
- **Review** - everything else

3) Weekly Plan

This sheet is **auto-generated**. You do not type the topics or tasks. The 7 rows fill themselves from the Topic Planner priorities + your Daily Availability.

You only edit three columns:

Column	What you do
Done?	Yes , No , or Skipped after the session.
Actual Min	Real minutes you studied.
Notes	Anything you want to remember.

Below the table:

- **Week Capacity & Health** shows Available, Planned, Done, and Status (Balanced / Under capacity / Over capacity).
- **Weekly Reflection** is a short Sunday check-in (4 prompts).

Your weekly workflow

1. **Sunday evening (5 minutes).** Open the Dashboard. Look at the Daily Availability panel. Adjust Minutes / Energy / Mode for the next 7 days based on real life.
2. **Monday-Saturday (every study day).**
3. Open the Dashboard. Read "What Should I Study Next?".
4. Open the Weekly Plan tab. Find today's row.
5. Study the Auto Task for the suggested minutes.
6. Mark **Done?** and fill **Actual Min**.
7. **After studying.** If you completed real hours on a specific topic, jump to Topic Planner and add to its **Completed Hours**. Update **Status** if it changed (e.g., from Learning to Practicing).
8. **End of week.** Fill the 4 reflection prompts at the bottom of Weekly Plan. Adjust next week's Mode column on the Dashboard.

That is the whole workflow.

What auto-updates when you change something

You change	What recomputes
Dashboard Exam Date	Days Remaining, Weeks Remaining, all readiness math.
Dashboard Daily Mode	That day's topic, task, and suggested minutes.
Dashboard Daily Minutes	Suggested Minutes (capped to mode limits) + Weekly Available.
Topic Planner Confidence	Priority Score for that topic + everything ranked from it.
Topic Planner Include?	Priority * Include Multiplier (Yes 1.0, Later 0.5, No 0).
Topic Planner Status = Exam Ready	Priority drops to 10% (topic moves to "Keep Warm").
Topic Planner Status = Skipped	Priority becomes 0.
Topic Planner Completed Hours = full	Progress hits 100%, priority drops to 10%.
Weekly Plan Done? = Yes	This Week counter increases.
Weekly Plan Actual Min	Done Hours total updates.

Mode rules in plain English

Mode	Time	What you actually do	When
Normal	25-45m	Highest-priority topic. Concept + 2-4 examples.	After-work weekday.
Low Energy	10-20m	Generic light task. Formula lookup, mistake review, flashcards, light Ethics, Engineering Economics drill. No specific topic - low pressure.	Tired evenings.
Family	20-45m	Light review of a Tier 2 / Tier 3 topic. No heavy theory.	Weekends with family time.
Rest	0	Nothing. Recover.	Whenever you need.

The planner picks topics this way:

- **Normal days** rotate through the top-priority Tier 1 / Tier 2 topics, never repeating the same topic twice in the same week.
- **Family days** pick the lightest Tier 2 / Tier 3 topic - never Tier 1 - so you stay fresh.
- **Low Energy days** rotate through 6 backup tasks (formula lookup, solved example, mistake review, flashcards, Ethics, Engineering Economics).
- **Rest days** show "Rest. No study required."

Daily Availability cheat sheet

Set your default Mode for each weekday once. The planner picks topics around it.

Day	Suggested default
Sunday	Normal 30 min, energy 2 (start of week, easing in).
Monday	Normal 35 min, energy 3.
Tuesday	Normal 30 min, energy 2.
Wednesday	Normal 35 min, energy 3.
Thursday	Low Energy 25 min, energy 2 (mid-week tired).
Friday	Family 30 min, energy 3.
Saturday	Family 45 min, energy 4 (longest session).

Override any day when life changes.

How to update Completed Hours

1. Finish a study session.
2. Open Topic Planner.

3. Find the topic you worked on. Add minutes / 60 to its **Completed Hours** cell. Example: studied 35 minutes on **6.6 Impedance** -> add **0.58** (or just round to **0.5**).
4. If your understanding jumped, also bump **Confidence** by one and update **Status** if it changed.
5. Done. Dashboard refreshes automatically.

How to mark a daily session done

1. Open Weekly Plan.
2. Find today's row (the Day column shows the weekday).
3. Set **Done?** to **Yes** (or **Skipped** if you missed it without guilt).
4. Type the **Actual Min** you studied (can differ from Suggested Min).
5. Optional: short note in **Notes**.

The "This Week" card on the Dashboard updates immediately.

What to do if the plan looks overloaded

Open Weekly Plan and look at **Capacity Status** in section B.

- **Balanced** - all good. Just study.
- **Under capacity** - your Available Hours total is below 3. Focus on Tier 1 only this week. The planner already prioritizes Tier 1 for Normal days, so you only need to keep pushing the same topics.
- **Over capacity** - you scheduled more than you have time for. Cut quickly: 1. Switch one Normal day to Family (lighter task, often shorter). 2. Or drop one day to Rest. 3. Or reduce the Min on one day.

The Weekly Plan immediately updates. No copy paste needed.

What to postpone first

Use this order when you must cut:

1. **Tier 3 with high boredom and low confidence.** Section 11 Electromagnetics is the #1 candidate. Set **Include?** to **Later**.
2. **Tier 2 topics with high difficulty and low quick-win.** For example 7.3 Laplace heavy parts, 8.3 Digital Filters & Z-Transforms.
3. **Anything where Status is already Strong or Exam Ready.** The planner already deprioritizes these to 10% but you can move them to Later to remove from rotation entirely.

Never postpone Tier 1. Those are the core scoring chapters: Mathematics, Ethics, Engineering Economics, Circuit Analysis, Electronics, Power Systems, Digital Systems.

Quick troubleshooting

- **A day shows "No included topics. Update Topic Planner."** All your Tier 1 topics for Normal mode are at 100% / Exam Ready or Include != Yes. Open Topic Planner and re-enable some Tier 2 topics.

- **Charts look empty.** That is normal early in the cycle. Once you set Status / Completed Hours for a few topics, the donut and bar charts populate.
 - **Weekly Plan shows the wrong week.** The week is computed from `TODAY()` and starts on Sunday. If Excel's date is correct, the week is correct. If you opened the file mid-week, today's row is highlighted by the "What Should I Study Next?" box on the Dashboard.
-

What is NOT here (by design)

- No question bank.
- No copy / paste.
- No Arabic.
- No manual weekly task writing.
- No manual topic selection in Weekly Plan.

Just yellow cells in, green answers out.

Good luck. The planner does the planning - you do the studying.
